(a) work distributions
$\tau = 0.2$ ($\tau/\tau_1 = 0.8$)
$\tau = 2$ ($\tau/\tau_1 = 7.7$)
exact ΔF
$P(W)$
work W [ε]
(b) convergence of the Jarzynski estimate
$\widehat{\Delta F}_j$ [ε]
pulls used per estimate n
(c) $e^{-\beta W}$, $\tau = 0.2$ ($\tau/\tau_1 = 0.8$)
fraction per bin
$\log_{10} e^{-\beta(W-\Delta F)}$
(d) $e^{-\beta W}$, $\tau = 2$ ($\tau/\tau_1 = 7.7$)
pulls
share of sample mean
exact (Gaussian)
exact share
exact mean = 1
